Enterprise Challenge

- Desktop client users think "access the LAN" when connecting remotely
- Network services using non-IP protocols are still common in enterprise environments
- IS groups need a single desktop solution to reduce deployment and support overhead

The Enterprise Needs Intragy[™]

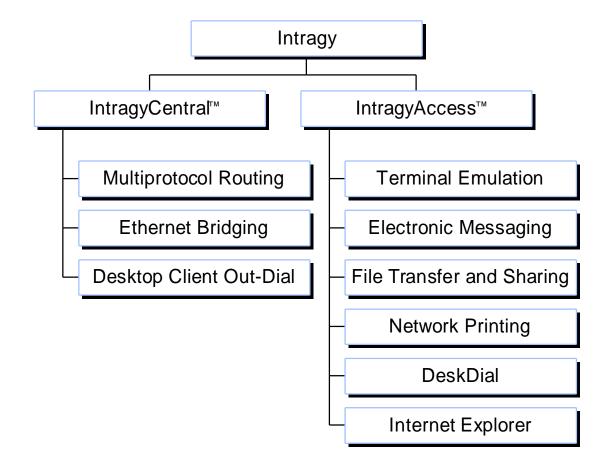

What is Intragy

Ascend's enterprise solution platform combining MAX[™] family-based features with desktop client software to provide equal access solutions for all users of an enterprise network

ASCEND

Intragy Offering

Intragy Advantage

- Intragy provides the enterprise with a total access solution from switch to desktop
- Intragy provides equal end-user solutions for all major enterprise desktop platforms:
 - Windows 3.1
 - Windows 95
 - Windows NT 4.0
 - Macintosh OS
- Intragy eases the distinction between local and remote access for enterprise network users by providing the same access solutions for enterprise network users
- Intragy reduces deployment, training and support overhead for your IS groups by providing a single software solution for all major platforms

IntragyCentral

Offering Detail

ASCEND

IntragyCentral

The following are components of IntragyCentral:

- Multiprotocol routing
- Ethernet bridging
- Desktop Client Out-dial (DeskDial)

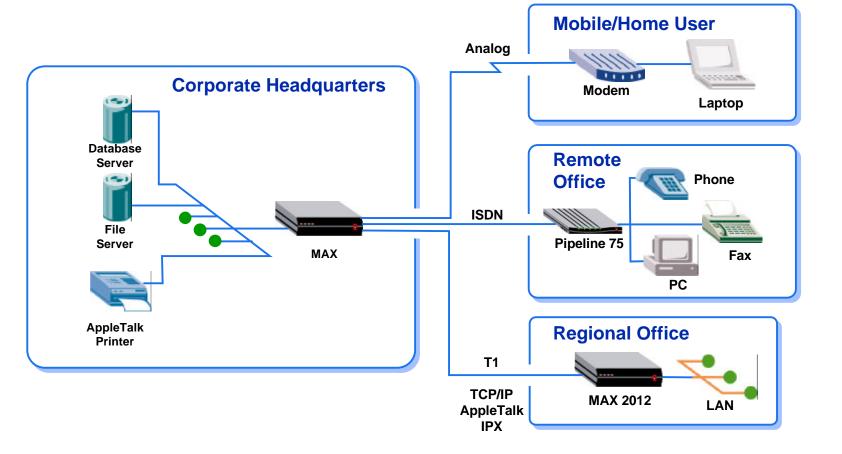

Multiprotocol Routing

- Provides remote access to IP, IPX and AppleTalk based services to branch offices, telecommuters and dial-up users
- Extends network service access to telecommuters, home and branch offices

Multiprotocol Routing Example

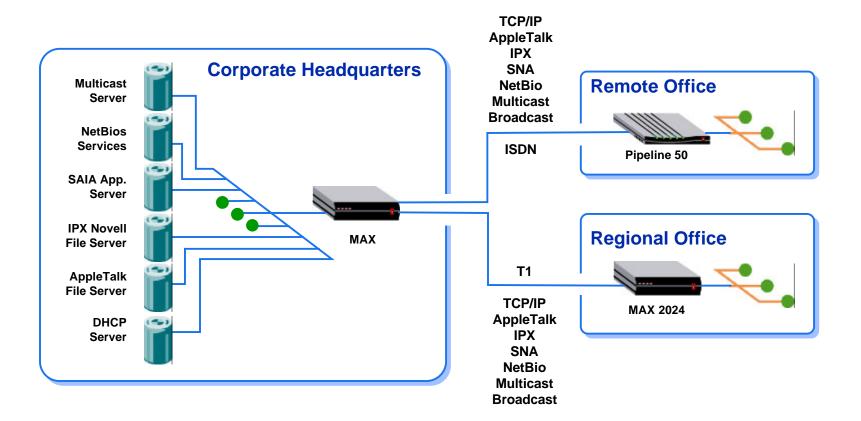

Ethernet Bridging

- Expands reach of central LAN services by forwarding Ethernet traffic between remote locations
- Opens access to non-routed protocols
- Eases administration of remote offices by localizing address assignments into a single logical-network topology

ASCENT

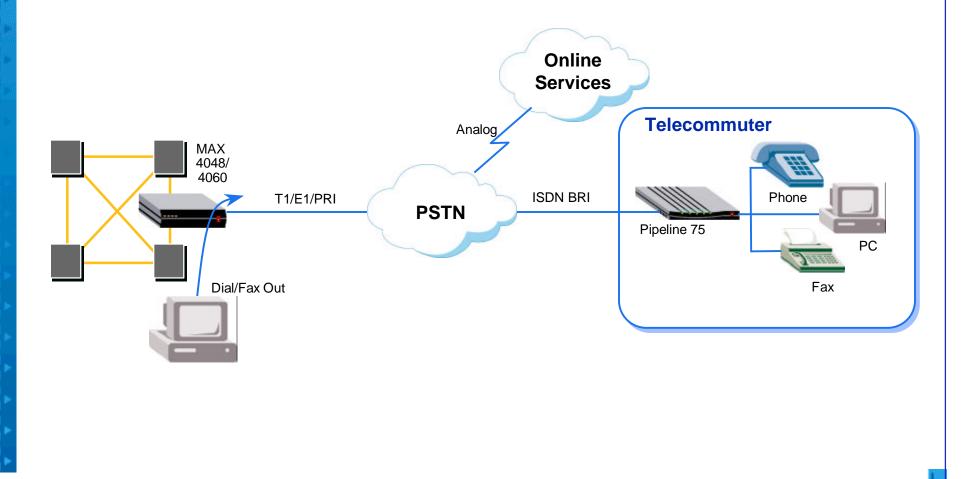

Ethernet Bridging Example

Desktop Client Out-Dial (DeskDial)

- Turns any MAX or MAX TNT[™] into a network accessible modem pool
- DeskDial client software accesses modems available in MAX and MAX TNT hardware for transparent out-dial capabilities
- Eliminates the need to provide analog phone lines directly to your PCs for outside access
- Can be used for FAX, remote TTY, online services and remote site access

IntragyAccess

Offering Detail

IntragyAccess

• The following are components of IntragyAccess:

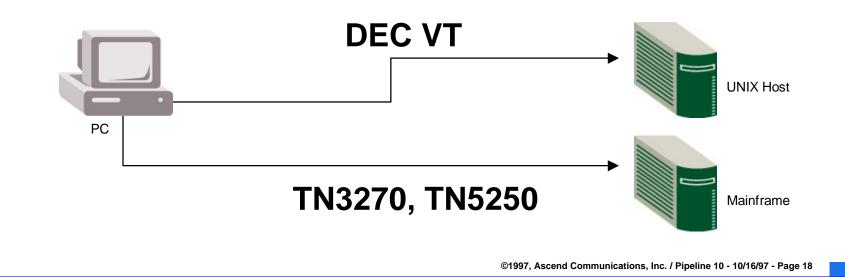

- Terminal emulation
- Electronic messaging
- File transfer and sharing
- Network printing
- Remote Access (Windows 3.1, Macintosh OS)
- Multinational access

IntragyAccess

- The one solution for desktop client infrastructure providing core network access
- Cross-platform support for Windows 3.1, 95, NT 4.0 and Macintosh OS provides one software solution for all major enterprise desktop platforms
- Simplified installation and integrated user interface reduces IS deployment, training and support overhead

Terminal Emulation

- Dec VT 52-320
 - Provides host access to UNIX and VAX applications
- IBM TN3270, IBM TN5250
 - Host access to mainframe-based legacy systems
- Full range of features including, keyboard mapping, macros, S/KEY, pass-through printing and IND\$FILE

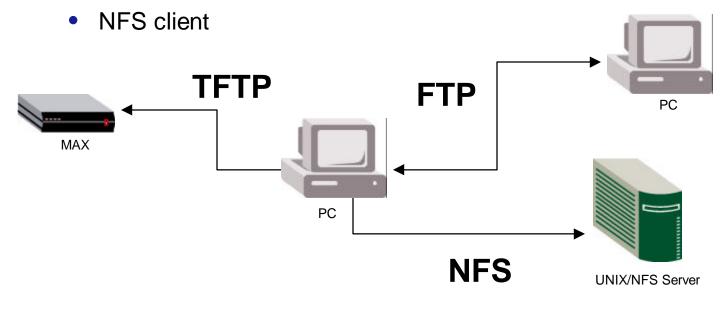

Electronic Messaging

- Enterprise-directed e-mail access provides platform independent communications
- Multimedia e-mail support with MIME the Internet standard for electronic message formatting with inline support for graphics, sounds and QuickTime and file attachments — drag and drop icons from message window to desktop
- e-mail actions highlight, sort and file mail for any criteria

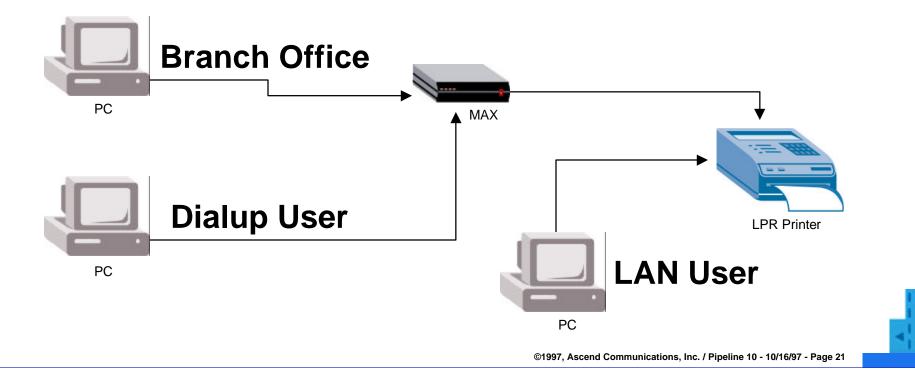

File Transfer and Sharing

- Open desktop client access to share files between all network hosts
- Full range of file transfer and sharing access with
 - FTP client and server
 - TFTP server

Network Printing

- LPR client for target platforms provides access to many laser printers and print servers over any TCP/IP network
- Only LPR client for the Macintosh

Multinational Access

• Support for major international character encodings

- ISO 8859-1 (Latin 1)
- 2022-JIS, EUS-JP, SJIS (Japanese)
- BIG5 (Chinese)

Internationally localized

- French
- German
- Japanese

Summary

- Intragy combines key remote access capabilities with key client software components for the end-users of an enterprise network
- Cross-platform desktop client software offering provides the same solution for all major enterprise desktop platforms to allow users to continue using the systems they're used to
- Deployment, training and support overhead and reduced for IS organizations with one solution for all users in all connection scenarios

Intragy: Power for Enterprise Access
